Erratum

Erratum to “Human influenza A viruses are proteolytically activated and do not induce apoptosis in CACO-2 cells” [Virology 313 (2003) 198–212]☆

Oleg Zhirnov^{a,*} and Hans-Dieter Klenk^b^a D.I. Ivanovsky Institute of Virology, Gamaleya 16, Moscow 123098, Russia^b Institute of Virology, Philipps University, Marburg 35037, Germany

The publisher regrets that a typesetting error resulted in the omission of Figs. 5H and 5I. These figures appear here along with their legend.

H.

I.

Fig. 5. Death parameters in CACO-2, MDCK, and CV-1 cells infected with influenza A virus. (H and I) Mock-infected, Aichi-infected (32, 48, and 58 h.p.i.), and staurosporine-treated for 20 h (ST-20) CACO-2 cells were tested either with M30-cytodeath monoclonal antibodies (H) or with annexin-V (I) procedures, respectively, and were visualized with “True Blue” substrate followed by light microscope observation. Amounts of positive cells as a percentage of total cells are shown at the bottom.
